SUMMARY

Systems and business analyst with 5.7 years in government, mining and healthcare. I own a task end to end: from business and legal requirements through integrations and documentation to launch and user training. Three times I started in an unfamiliar industry and each time brought the system into production. I use AI as a working tool: my own agents with a knowledge base review requirements and specs before they reach developers.

EXPERIENCE

Samgau Holding

May 2025 – present

Lead Analyst

Unified Construction Portal (qportal.kz): a nationwide government system for the construction industry, 20,000–30,000 users, integrations with state registries, private and internal systems.

- Joined a system that had been in development for 5 years and brought key expert-review processes to pilot operation in 6 months, by the legal deadline. 20,000+ applications processed.
- Redesigned the integration with private expert organizations (SOAP, ~20 statuses, 10 stages, ~30 use cases). Integration Help Desk tickets: 10–15 a day at the start of the year, 0–3 now.
- Defect Help Desk tickets: about 30 a day at the start of the year, 0–5 now.
- Designed 4 zero-downtime integrations and several migrations. The largest: ~1,000 projects and 3,000+ documents.
- Designed the state bank of construction projects module for the new Construction Code: agreed an extended MVP, launched by the legal deadline.
- All contract obligations delivered on time; the system runs stably in production.

AG TECH

May 2022 – May 2025

Systems Analyst → Lead Systems Analyst → Team Lead

DMMS (dmms.kz): a production management system for mines and processing plants. Joined as a startup; in 3 years the product grew to 30+ projects in Kazakhstan and the CIS and 10,000–15,000 users, the company to 70+ employees.

- Kazakhmys: personnel positioning and emergency alerts at 12 mines, 5,000 users. In parallel, Kazzinc: the same system at its mines.
- Polymetal, a large processing plant: precise positioning indoors and across the site, emergency alerts, dead and hazardous zones. Trial operation in 6 months. In parallel, KazMinerals (Kyrgyzstan): positioning, alerts, traffic light control.
- Qarmet, 5 mines: positioning, alerts and personnel access: administrative building entry, breathalyzer and medical check, lamp issue, mine descent. Lead analyst, pilot operation in 6 months, ran acceptance tests, launch and training on site.
- Designed the positioning subsystem: ~200 events per second per mine, up to 1,000 people monitored.
- Designed the move of 9 domains from a monolith to microservices (REST, gRPC, RabbitMQ).
- Led a team that grew from 5 to 10–12 people. Spec templates and analysis reviews cut spec preparation time by 40%. Trained 3 interns into independent analysts in 6 months.

Cushpen Group

Mar 2021 – May 2022

Business Analyst

Avicenna, a medical information system.

- Led the rollout analysis at the National Research Oncology Center: ~500 users, 1,000+ patients a month.
- Integrations with lab, blood donor and PACS systems, updates for new legislation, user training.

SKILLS

Analysis	Systems and business analysis, requirements elicitation, writing tasks for developers
Documentation	Technical specifications, SRS, use cases, user stories, acceptance test programs, user and admin guides, acceptance criteria
Integrations	API design, REST, SOAP, gRPC, Kafka, RabbitMQ, microservice architecture
Modeling and data	BPMN 2.0, Camunda, UML, State Machine, ERD, SQL, PostgreSQL, data migration
Tools	Jira, Confluence, Figma, Postman, Swagger, Scrum, Kanban
Team	Team management, mentoring
AI	Own AI agents (Claude) with a knowledge base and memory, requirements review, AI-assisted development

EDUCATION AND LANGUAGES

Degree in information security. Russian, Kazakh, English.
